

What is claimed is:

1. An object holder assembly comprising:
a body having an opening formed therein; and
a panel movably positioned adjacent said opening for movement between an
5 extended position and a retracted position;

wherein said panel has a slot formed therein, said slot being configured for
receiving an object therein.

2. The object holder assembly defined in Claim 1 further comprising a
10 plurality of panels, wherein each panel has differently shaped slots formed therein.

3. The object holder assembly defined in Claim 2 wherein said plurality of
panels are stacked in a generally vertical manner.

15 4. The object holder assembly defined in Claim 3 wherein each
successively lower panel has a generally smaller slot formed therein than the slot
formed in each successively higher panel.

5. The object holder assembly defined in Claim 3 wherein each slot formed
20 in each panel is generally concentrically aligned with the openings of each respectively
higher and lower panel when said panels are in the extended position.

6. The object holder assembly defined in Claim 1 wherein the panel has a
tab extending therefrom for selectively manually gripping the panel.

25

7. The object holder assembly defined in Claim 2 wherein each panel has a
tab extending therefrom for selectively manually gripping each panel; and
selectively moving a panel causes adjacent panels to move therewith.

8. The object holder assembly defined in Claim 1 wherein the bottom of said object holder assembly has a plurality of concentric rings formed thereon.

9. The object holder assembly defined in Claim 1 wherein the object is at least one of a cup, a can, a mobile phone, a personal digital assistant, and a laptop computer.

10. The object holder assembly defined in Claim 2 further comprising a cover panel wherein said cover panel is the uppermost panel and has a generally continuous surface.

11. The object holder assembly defined in Claim 1 wherein said slot in said panel is sized to sufficiently frictionally engage said object for securing the object within the slot.

15

12. An object holder assembly comprising:
a plurality of panels, each of said panels slidably positioned within said recess for movement between an extended position and a retracted position;
wherein each of said panels has a slot formed through a surface of the panel,
each lower slot being successively smaller than each successively upper slot.

20

13. The object holder assembly defined in Claim 12 wherein said panels are stacked in a generally vertical manner.

14. The object holder assembly defined in Claim 12 wherein each panel has a selectable tab formed thereon, each tab being staggered relative to a tab formed on a successively higher panel.

25

15. The object holder assembly defined in Claim 14 wherein each tab is generally perpendicular to the surface of the panel.

30

16. The object holder assembly defined in Claim 12 further comprising a cover panel wherein said cover panel is the uppermost panel and has a generally continuous surface.

5

17. The object holder assembly defined in Claim 12 wherein at least one of said panel has a plurality of slots formed therethrough.

18. The object holder assembly defined in Claim 17 wherein said slots are
10 positioned side by side.

19. The object holder assembly defined in Claim 17 wherein said slots are positioned one in front of the other.

15 20. The object holder assembly defined in Claim 12 wherein said object holder is retractable relative to a vehicle console member.
